

Mirror TVs

ELECTRIC MIRROR[®]
HOTEL LUXURY

**“The one product that can
single-handedly redefine your hotel’s status.”**

– Jim Mischel, President & Chief Designer

Leaving an unforgettable impression on guests, Mirror TVs are the new standard for luxury hotels. The surprising experience and high-tech luxury drive guests to visit again and again.

Electric Mirror’s® design team works directly with interior designers and hotel owners to ensure that every Mirror TV not only offers a surprising element of technology to guest baths and spas, but also fully integrates and enhances the overall design concept for a project.

Electric Mirror® is the World Leader in Mirror TV Technology™, utilizing 1-inch thick LCD-TVs that are the brightest available. Electric Mirror’s® designs are unsurpassed in technology and their fashion-forward aesthetic.

MIRROR TV TECHNOLOGY

Electric Mirror's® Mirror TV's utilize ultra-bright, high-definition LCD-TV technology while maintaining an amazing 1-inch thick profile. Our Mirror TV's are Energy-Star compliant and registered. On-Screen Display offers language support in Spanish, French and English.

BOE™ Technology

Treat your guests to the luxury of a Mirror TV at an entry level pricepoint. Using the brightest mirror possible, BOE technology allows 99% of the LCD-TV's brightness to display when in the on position. When turned off, the TV screen appears as a black screen.

AV-Mirror™ Technology

The best of both worlds, AV-Mirror Technology uses the brightest mirror possible while camouflaging the TV screen when in the off position. Appearing as a reflective surface that varies in brightness from the surrounding mirror when turned off, AV Technology allows the ultra-bright LCD-TV to display 99% of its brightness and color when turned on.

V-Mirror™ Technology

For the ultimate element of surprise, Mirror TVs utilizing V-Mirror Technology allow the TV screen to completely vanish when turned off. Electric Mirror® uses the brightest LCD-TV's on the market to offer the clearest picture to transmit when turned on. The reflection of V-Mirror is darker than that of AV and BOE technologies.
