

Vive™

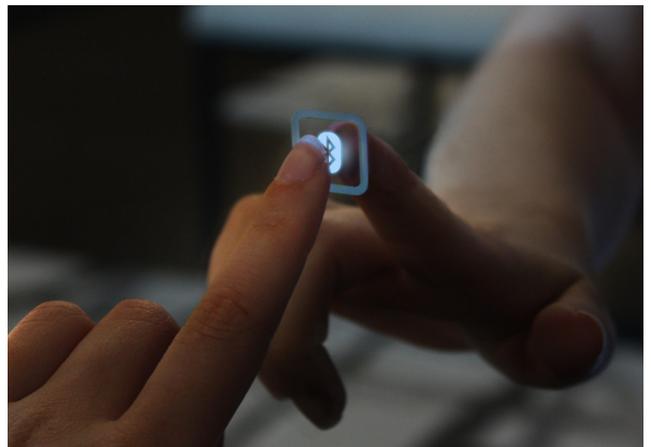

Put music in your mirror.

EM
ELECTRIC
MIRROR®

Vive lets you play music directly through our audio-enhanced mirrors.

Fine tune your lighted mirror with Vive SmartSound™ Technology and turn any room into a virtual amphitheater. Vive allows you to pair a Bluetooth-enabled smart phone or tablet to the mirror, instantly transforming it into a wireless stereo system. Simple and easy to use, Vive can create a symphonic streaming audio experience in any space with just a touch.

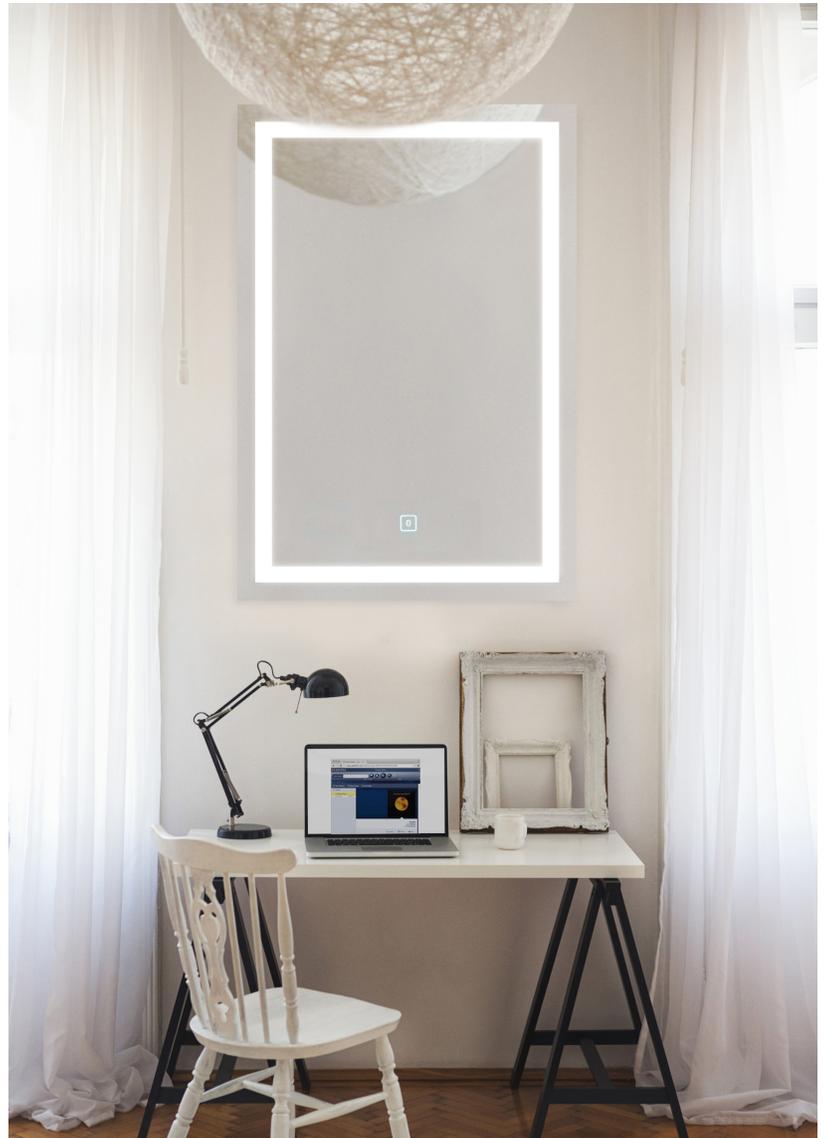

This product is protected by one or more patents.

Vive enhances your audio-listening experience:

Producing rich, hi-fidelity audio through the mirror's integrated speakers, and featuring an impressive 30-foot range for the Bluetooth® signal, Vive is an audiophile's dream come true. And because the connection is via a Bluetooth-enabled phone or tablet, you never need to worry about a docking station taking up value countertop space, or losing full function of your connected device.

Vive is intuitive and simple to operate:

1. Simply touch the power button on the mirror.
2. On your Bluetooth-enabled device, select "Electric Mirror" in your Bluetooth settings. Your device will be paired to the mirror when the blinking red sync light turns a solid blue.
3. Once paired, start your music via your device. Control the volume using the mirror control panel or directly from your device.

Vive joins our Inspired Technology collection of products.

Savvy™
